Decommissioning Done Right

Wiped, Certified,
Guaranteed...

Security and Responsibility. We know that sensitive data must be treated with great responsibility. Old hardware must be audited, securely transported and thoroughly erased to protect your company's and your client's valuable data. The security of your data is crucial and the ability to track this process must be transparent. Mohawk's proven Secure Data Process allows tracking and transparency. Your data security is our precious cargo.

Data Center Decommissioning

Decommissioning existing IT hardware in order to usher in cutting edge IT solutions requires processing your data center hardware the right way. There will be many parts that must be accounted for and vast amounts of secure data that must be protected. With Mohawk as your ITAD partner decommissioning your data center will be secure and profitable.

A hand is shown reaching over a server rack. In the foreground, a close-up of a motherboard is visible, showing various components like capacitors and chips. The background shows a server rack with multiple units. The lighting is blue and dramatic, highlighting the hand and the hardware.

Inventory and Documentation

Process is the backbone of successful data center decommissioning. Our process entails auditing, inventory and logging of all hardware and parts. Accounting for all equipment being removed from your data center is key in ensuring proper processing of all hardware and data security procedures.

What About The Risk?

Compliance. There are many rules and regulations regarding Data Security. Being in compliance with industry, corporate, or regulatory standards such as adhering to General Data Protection Regulation (GDPR) and state requirements like the California Consumer Privacy Act (CCPA).

Data Sanitization

Here is the real key to ITAD. You may have thousands of dollars worth of used hardware but it is currently filled with your company's and your client's valuable data.

Data that must be securely wiped, certified and guaranteed...Sanitization is critical in this process. Security breaches must be prevented by correctly handling and data wiping every piece of used hardware.

Mohawk offers multiple tiers of Data Sanitization to meet your Compliance obligations. Talk to you ITAD specialist for a quote today.
